

# ALBA RINCÓN MUÑOZ

I'm a software engineer based in Barcelona with a focus on back-end development. I'm used to working in agile, fast-paced, cross-functional teams where I can learn skills from different people and participate in new developments end-to-end. When I'm not programming at work you can find me investigating and creating small projects that I find useful while I learn something new.

## EXPERIENCE

### Senior software engineer

Typeform, Barcelona – (Jan 2017 - present)

- Designed and developed from scratch the APIs for the new integrations system as part of the company efforts to open the possibility for external developers to implement native integrations.
- Developed and maintained the APIs for the webhooks service and native integrations platform in Go. Collaborated in the implementation of the React/redux front-end consuming those same APIs. Developed new integrations with external services in Go using OAuth.
- Extracted and migrated an important part of the legacy platform into a new microservice developed in Go.
- Developed and evolved new APIs dedicated to the creation of typeforms on PHP using the Symfony2 framework.

### Software engineer

MyBuilder, London – (Aug 2015 - Dec 2016)

- Developed and tested new features and maintaining the platform back-end (Symfony2, PHPUnit).
- Implemented new APIs in Symfony 2 and participated in the development of the front-end to consume them using React.

### Software engineer

KingEclient, Barcelona – (Jul 2010 - Jul 2015)

- Developed Drupal 6 & 7 websites.
- Implemented the Drupal back-end and content migration of the new S&D Group website.
- Implemented the Drupal back-end of the new MNAC (Museu Nacional d'Art de Catalunya) website and the migration/synchronization of the museum's catalog.

## PROJECTS

**Hack the weather**: won the Hack the Planet New Relic hackathon in the "New year, new resources" category along with my friend Anabella.

**Migrabooks**: a collaborative platform to share books and follow their journey around the world (developed in Laravel).

**Le bot sportif**: a Telegram bot that will help you keep track of your favorite sports events (developed in Go integrating with an external sports API).

**Notion.fan**: a website for sharing Notion templates in Spanish (developed in Laravel).

**Que tramo horario es?**: a simple website to check the current time slot prices for the new 2021 electricity tariffs in Spain (developed in Javascript using AlpineJS).
